Democratizing Insights

in 2015

\$11,117,003 Total payments Ophthalmology

Provider's Services at a Glance, 2015

Category	Total reimbursed by Medicare	Percent of total reimbursements by Medicare
Drugs	\$9,058,512	81.5%
Surgeries and procedures	\$968,328	8.7%
Exams and medical services	\$883,228	7.9%
Evaluation and management	\$141,303	1.3%
Other	\$23,153	0.2%
Imaging tests	\$2,930	<0.1%

Note: Category totals may not add up to a provider's total payments because information about a provider's specific services to fewer than 11 Medicare patients is suppressed by Medicare.

Provider's Services in Detail, 2015

Procedure	Number performed	Number of Medicare patients	Average Medicare reimbursement per procedure	Total Medicare payments for procedure
Injection, ranibizumab, 0.1 mg ICD9: 86.22 ICD10: J02.01-0	28,760 Top 20% nationally	722	\$307.90	\$8,855,204
Injection of drug into eye Surgeries and procedures ICD9: 87.02-0	5,880 Top 20% nationally	924	\$89.81	\$528,083

Data @ POC "SMART" App

The screenshot shows the SMART app interface for a patient named Jane Doe. The top navigation bar includes 'Cardiology Associates', 'Calendar', 'Patients', 'Claims', 'Financials', 'Reports', 'Quality', and 'Support'. A search bar and 'Log out' button are also present. The left sidebar contains navigation options: Summary, Encounters (selected), Problem List, Medications, Procedures, Preventative Maintenance, Care Team, Quality Measures, Vaccines, and Family History. The main content area displays patient information: Jane Doe, Female, DOB 4/2/1950 (69 yo), Medicare No. 19990000002901, CMS Roster Y, exp. 10/30/19. Below this is a table of encounters.

STATUS	DATE	TYPE OF VISIT	PROVIDER	LOCATION	REASON	SOURCE	REQUEST RECORDS
Received	5/15/19	Office Visit	Dr. Nick Robison, Primary Care Associates	Tampa, FL	Chest pain	\$	REQUEST
Received	4/10/19	Emergency Room	Dr. Lauren Smith, Gleason Medical Center	Wesley Chapel, FL	Chest pain	\$	REQUEST
Received	1/28/19	Urgent Care Facility	Dr. Arlene Lobo, On Demand Urgent Care	Tampa, FL	Dizziness	\$	REQUEST
Received	12/5/18	Urgent Care Facility	Dr. Robert Nickeson, After Hours Urgent	Washington, DC	Shortness of breath	\$	REQUEST

Scalable and accurate deep learning with electronic health records

Alvin Rajkomar^{1,2}, Eyal Oren¹, Kai Chen¹, Andrew M. Dai¹, Nissim Hajaj¹, Michaela Hardt¹, Peter J. Liu¹, Xiaobing Liu¹, Jake Marcus¹, Mimi Sun¹, Patrik Sundberg³, Hector Yee¹, Kun Zhang¹, Yi Zhang¹, Gerardo Flores¹, Gavin E. Duggan¹, Jamie Irvine¹, Quoc Le¹, Kurt Litsch¹, Alexander Mossin¹, Justin Tansuwan¹, De Wang¹, James Wexler¹, Jimbo Wilson¹, Dana Ludwig¹, Samuel L. Volchenboum¹, Katherine Chou¹, Michael Pearson¹, Srinivasan Madabushi¹, Nigam H. Shah¹, Atul J. Butte², Michael D. Howell¹, Claire Cui¹, Greg S. Corrado¹ and Jeffrey Dean¹

Predictive modeling with electronic health record (EHR) data is anticipated to drive personalized medicine and improve healthcare quality. Constructing predictive statistical models typically requires extraction of curated predictor variables from normalized EHR data, a labor-intensive process that discards the vast majority of information in each patient's record. We propose a representation of patients' entire raw EHR records based on the Fast Healthcare Interoperability Resources (FHIR) format. We demonstrate that

Uri Shalit @ShalitUri · Jun 20, 2018
Replying to @ShalitUri
Note the overlap of the confidence intervals for the AUCs of the baseline model & DL model. My takeaway is that *one should use logistic regression over DL* on such tasks. The vastly greater simplicity and interpretability of LR far outweigh the tiny (if at all) gain in accuracy.

Uri Shalit @ShalitUri · Jun 20, 2018
Another possible take: we haven't yet found the right deep learning architectures that will give us the kind of performance boosts we've seen in image, text, and sound modeling

Pitched as a revolutionary approach to predicting adverse outcomes in health care

Discussion: Importance of Data Ethics

RESEARCH ARTICLE

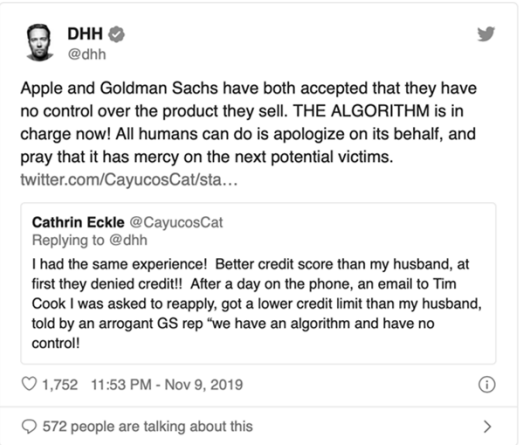

Dissecting racial bias in an algorithm used to manage the health of populations

Ziad Obermeyer^{1,2*}, Brian Powers³, Christine Vogel⁴, Sendhil Mullainathan^{5*,†}

+ See all authors and affiliations

Science 25 Oct 2019; Vol. 366, Issue 6464, pp. 447-453
DOI: 10.1126/science.aax2342

“Overall, only 18% of the patients identified by the algorithm as needing more care were black, compared to about 82% of white patients. If the algorithm were to reflect the true proportion of the sickest black and white patients, those figures should have been about 46% and 53%, respectively.”

DHH @dhh
Apple and Goldman Sachs have both accepted that they have no control over the product they sell. THE ALGORITHM is in charge now! All humans can do is apologize on its behalf, and pray that it has mercy on the next potential victims. twitter.com/CayucosCat/sta...

Cathrin Eckle @CayucosCat
Replying to @dhh
I had the same experience! Better credit score than my husband, at first they denied credit!! After a day on the phone, an email to Tim Cook I was asked to reapply, got a lower credit limit than my husband, told by an arrogant GS rep "we have an algorithm and have no control!"

There have been extraordinary gains from machine learning in pattern recognition for CT scans, X-Rays but clear in Rajkomar et al.–

It is not clear that predicting in hospital mortality via EHR is the best way to improve health care.

Different question might be which set of measures would be most useful to know in order to leverage an improvement in outcomes?

- identifying patients in the community who are at greatest risk of hospitalization, falls, or ER visits, thus upstream is likely better.
